

# DISCOVERING WATERLOOP

by Carlo Leoni

**waterloop®** system - beautiful sanitary technology - is a new and unique technology, designed for the Eco-Sustainable Marine and Building Industry. The idea is for a complete sanitary system utilizing as less water as possible, and the possibility to re-use it, via a total biological purification system. Out of technology, waterloop takes care of the global design of the bathrooms, designed with intelligent and smart solutions.

The launch of waterloop® was at International Boat Show in Genova (3rd-11th October this year). The product program is designed with a Consumer-oriented approach. It includes:

- a complete sanitary ware suite. The innovative WC is self cleaning, no sneeze, very low water consumption (1.8 lit-strong flush, 0.9 lit light flush)
- a compact-size suction and organic waste grinding system. It guarantees a

**waterloop® purificator product benefits**

- Crystal-clear waters, bacteria free, suitable for all purposes, except alimentary ones (ref: MEPC 159/55).
- Continuous 100% biological process, optimal water purification.
- Energy consumption 8 persons, 4 bathrooms purificator: 300 W, 2,2 A.
- Maintenance free.
- The bacteria flora, which sediment on the waterloop® filters absorb any smell.

**waterloop® WC product benefits**

- 1,8 Lt/0,9 Lt per flush.
- No clogging.
- No brush.
- No sneeze.

no-clogging WC and sanitary pipelines. Silent, it works with one or two to three WC' and fitted at a distance until 15 mt from WC', in the engine room for marine application, or in the basement or outside for building installations.

- a family of compacted-size, 100% biological process, bathroom waters purifications.

Water released is 100% crystal clear, no bacteria, according to MEPC 159/55 rules (Marine Environment Protection Committee), water for all purposes, except alimentary ones.

Waterloop® purifications avoid the use of holding tanks on board, with a continuous release of purified waters. Waters could be re-used to flush WC and, in a building installation, for gardening, washing cars and all purposes where not drinkable waters are allowed. Utilising the above technical and design products, waterloop® designs and supplies complete smart bathroom solutions, flexible on demand.

Company strategy is first step the Marine Industry, in which top quality and reliability products are heavy demanded, to jump then into the Eco-Sustainable Building sector.
